The State of California has, over the past several years, intentionally approved, funded and constructed transportation projects that were known by the state to increase VMT and GHG emissions, while intentionally thwarting efforts to reduce VMT and GHG emissions from those projects. The state was warned, and is still being warned, about approving, funding and constructing projects that increase VMT and GHG emissions. The state has ignored those warnings. The state is intentionally violating its own VMT and GHG reduction plans and policies, while at the same time submitting false and misleading documents and statements to federal agencies and courts of law that claim the state is following its own VMT and GHG reduction laws, statutes and policies.

Thank you

Tom Becker
