ROAD REPAIR AND ACCOUNTABILITY ACT OF 2017 PROJECT BASELINE AGREEMENT

SJ SR-4 Pavement Resurfacing and Restoration (EA 10-1C500)

	Resolution <u>SHUPP - P - 1319 - D9B</u> (will be completed by CTC)
1.	FUNDING PROGRAM
	Active Transportation Program
	Local Partnership Program (Competitive)
	Solutions for Congested Corridors Program
	Trade Corridor Enhancement Program
2.	PARTIES AND DATE
2.1	This Project Baseline Agreement (Agreement) for the SJ SR-4 Pavement Resurfacing and Restoration (EA 10-1C500), effective on, December 6, 2018 (will be completed by CTC), is made by and between the California Transportation Commission (Commission), the California Department of Transportation (Caltrans), the Project Applicant, and the Implementing Agency, sometimes collectively referred to as the "Parties".
3.	RECITAL
3.2	Whereas at its March 22, 2018 meeting the Commission approved the State Highway Operation and Protection Program, and included in this program of projects the <i>SJ SR-4 Pavement Resurfacing and Restoration (EA 10-1C500)</i> , the parties are entering into this Project Baseline Agreement to document the project cost, schedule, scope and benefits, as detailed on the Project Programming Request Form attached hereto as Exhibit A and the Project Report attached hereto as Exhibit B, as the baseline for project monitoring by the Commission.
3.3	The undersigned Project Applicant certifies that the funding sources cited are committed and expected to be available; the estimated costs represent full project funding; and the scope and description of benefits is the best estimate possible.
4.	GENERAL PROVISIONS
	The Project Applicant, Implementing Agency, and Caltrans agree to abide by the following provisions:
4.1	To meet the requirements of the Road Repair and Accountability Act of 2017 (Senate Bill [SB] 1, Chapter 5, Statutes of 2017) which provides the first significant, stable, and on-going increase in state transportation funding in more than two decades.
4.2	To adhere, as applicable, to the provisions of the Commission: Resolution <i>Insert Number</i> , "Adoption of Program of Projects for the Active Transportation Program", dated
	Resolution Insert Number, "Adoption of Program of Projects for the Local Partnership Program", dated
	Resolution <i>Insert Number</i> , "Adoption of Program of Projects for the Solutions for Congested Corridors Program", dated
	Resolution G-18-13, "Adoption of Program of Projects for the State Highway Operation and Protection Program", dated March 22, 2018
	Resolution <i>Insert Number</i> , "Adoption of Program of Projects for the Trade Corridor Enhancement Program", dated

- 4.3 All signatories agree to adhere to the Commission's State Highway Operation and Protection Program, Guidelines. Any conflict between the programs will be resolved at the discretion of the Commission.
- 4.4 All signatories agree to adhere to the Commission's SB 1 Accountability and Transparency Guidelines and policies, and program and project amendment processes.
- 4.5 Caltrans agrees to secure funds for any additional costs of the project.
- 4.6 Caltrans agrees to report on a quarterly basis; after July 2019, reports will be on a semi-annual basis on the progress made toward the implementation of the project, including scope, cost, schedule, outcomes, and anticipated benefits.
- 4.7 Caltrans agrees to prepare program progress reports on a quarterly basis; after July 2019, reports will be on a semi-annual basis and include information appropriate to assess the current state of the overall program and the current status of each project identified in the program report.
- 4.8 Caltrans agrees to submit a timely Completion Report and Final Delivery Report as specified in the Commission's SB 1
 Accountability and Transparency Guidelines.
- 4.9 All signatories agree to maintain and make available to the Commission and/or its designated representative, all work related documents, including without limitation engineering, financial and other data, and methodologies and assumptions used in the determination of project benefits during the course of the project, and retain those records for four years from the date of the final closeout of the project. Financial records will be maintained in accordance with Generally Accepted Accounting Principles.
- 4.10 The Transportation Inspector General of the Independent Office of Audits and Investigations has the right to audit the project records, including technical and financial data, of the Department of Transportation, the Project Applicant, the Implementing Agency, and any consultant or sub-consultants at any time during the course of the project and for four years from the date of the final closeout of the project, therefore all project records shall be maintained and made available at the time of request. Audits will be conducted in accordance with Generally Accepted Government Auditing Standards.

5. SPECIFIC PROVISIONS AND CONDITIONS

5.1 <u>Project Schedule and Cost</u> See Project Programming Request Form, attached as Exhibit A.

5.2 Project Scope

See Project Report or equivalent, attached as <u>Exhibit B</u>. At a minimum, the attachment shall include the cover page, evidence of approval, executive summary, and a link to or electronic copy of the full document.

. B. . . .

5.3 Other Project Specific Provisions and Conditions

1. INTRODUCTION

This is a resurfacing and restoration (2R) roadway rehabilitation project located on State Route (SR) 4 at the SR 4/I-5 interchange in the City of Stockton. The project will address pavement deterioration on SR 4 and on the connectors with Interstate 5 (I-5) and local street ramps.

The project is programmed in the 2018 State Highway Operation and Protection (SHOPP) for funding in the 2019/2020 fiscal year.

Project Limits	10-SJ-4

Project Development Category	5			

2. RECOMMENDATION

It is recommended that this project report be approved and authorization be granted to proceed to the design phase with the build alternative.

3. BACKGROUND

A Project Scope Summary Report (PSSR) was approved on August 9, 2016 and the project was targeted for programming in the 2018 SHOPP for delivery in the 2021/22 fiscal year. However, delivery has been accelerated to the 2019/20 fiscal year due to availability of SB 1 funds.

This project is scoped as a 2R (resurfacing and restoration) project per the guidelines in Design Information Bulletin 79-03. The 2R Project Certification was approved on

December 21, 2015 (Attachment J). A Safety Analysis report was prepared as part of the 2R Certification, and concluded there were no apparent safety issues that need to be addressed through geometric improvements to the existing roadway. As per 2R guidelines, approvals of design exceptions are not required.

The SR 4/I-5 interchange was constructed in 1970 as a four-level interchange with eight freeway to freeway connectors. The interchange also includes four local street ramps (two on-ramps and two off-ramps). SR 4 within the project limits consists of 3 lanes in each direction but only two lanes are currently used for traffic in each direction. The recently completed segment to the west (SR 4 Crosstown Ramp Extension) constructed two lanes in each direction and extended the freeway approximately one mile to the west where the freeway terminates at Navy Drive. The segment to the east is known as the Crosstown Freeway and consists of three to four traffic lanes in each direction as the eastbound and westbound connectors with I-5 merge and diverge, respectively, with SR 4. The posted speed limit is 65 miles per hour.

4. PURPOSE AND NEED

Purpose:

The purpose of this project is to restore the pavement to a state of good repair, improve ride quality, extend the pavement service life and minimize maintenance costs and effort.

Need:

The existing portland cement concrete (PCC) pavement of SR 4 and all the freeway-to-freeway connectors have developed 3rd stage cracking, resulting in rough riding quality and increasing maintenance needs. Additionally the flexible pavement of the local street ramps and the shoulder pavement on the connectors have developed alligator cracking and a rough surface.

A. Problem, Deficiencies, Justification

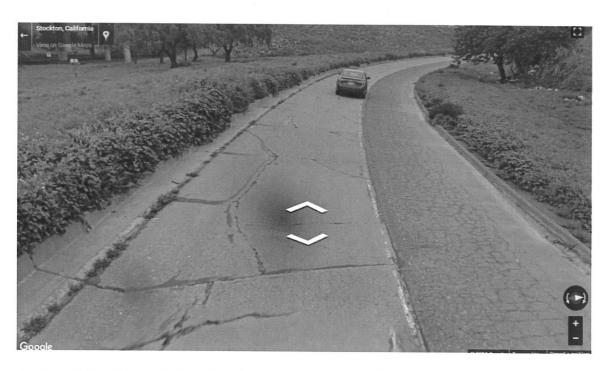

The pavement will continue to deteriorate rapidly requiring extensive repairs and exposure of maintenance personnel to unsafe traffic conditions. The Pavement Condition Report (Attachment I) indicates the pavement has developed major structural distress.

Eastbound SR 4

Southbound I-5 to Eastbound SR 4 connector

Eastbound SR 4 to Southbound I-5 connector

B. Regional and System Planning

SR 4 is classified as a Non-Interstate Strategic Highway Network (STRAHNET) route between I-5 and SR 99. West of I-5, SR 4 is part of the Interregional Road System (IRRS), classified as an intermodal connector. With the recent completion of the SR 4 Crosstown Ramp Extension project which removed the two ramps at Fresno Street and extended the freeway to Navy Drive, this segment of SR 4 provides a vital link to and from the Port of Stockton.

The 2014 Transportation Concept Report designates the segment of SR 4 west of I-5 to be an ultimate 4-lane freeway, while the segment east of I-5 is proposed to be an 8-lane freeway concept facility and a 10-lane freeway Ultimate Transportation Corridor. The current Level-of-Service (LOS) is "A" and the Concept LOS is "D".

This project is included in the Caltrans 10-Year SHOPP Plan. Coordinated with other planned projects in the area will be required. The following are other planned projects in the vicinity of this project:

10-0X690_ SJ-4- PM R15.7/19.2 Roadside Safety Improvements. Begin construction in July 2019.

10-1C860_ SJ-4- PM R17.3/R17.4 Reconstruct Hinge #32 (Crosstown Freeway Viaduct).

Begin construction in March 2020.

10-1F180_ SJ-4- PM R16.0/R19.4

Install Ramp Metering System on the westbound Center Street on-ramp. Begin construction in June 2022.

C. Traffic

Current and Forecasted Traffic:

Current (2016) ADT18,000	
Construction Year (2021) ADT 22,900	10-Year ADT
DHV (2041) 3,710 DHV (2061) 6,100	ADT (2041) 37,100 ADT (2061) 61,000
D57%	% Trucks 11.2%
T.I. (10-Year)	ESAL (10-Year)
T.I. (20-Year) 12.5 T.I. (40 – Year) 14.0	ESAL (20-Year) 15,407,657 ESAL (40-Year) 39,326,847

Note: ADT – Average Daily traffic; DHV – Design Hourly Volume; T.I. – Traffic Index; EASL – Equivalent Single Axle Loads; D – Direction

Collision Analysis:

The latest 3-Year (July 1, 2012 To June 30, 2015) Collision Data is shown below:

Accident Rates (ACC/MVM) 10-SJ-4- PM R15.5/R16.6

	Fatal	Fatal+Injury	Total
Actual	0	0.33	0.58
Statewide Average	0.006	0.44	1.01

Note: ACC/MVM - accidents per million vehicle miles.

The actual accident rates were lower than the average rate for similar facilities. There were 28 collisions reported within the study period, including 16 "injury", and no "fatal" accidents. Out of the 28 collisions, 20 were "rear end", with "speeding" as the primary collision factor.

There were no "fatal" accidents on any of the connectors and ramps within the project limits. Only one location, the westbound SR 4 to southbound I-5 Connector, had a significantly high number and higher than average accident rates. There were a total of 34 accidents reported along the curved alignment of this connector, including 15 "run-off-road" and 9 "sideswipe" type accidents.

Accident Rates (ACC/MV) Westbound SR 4 to southbound I-5 Connector

3	Fatal	Fatal+Injury	Total
Actual	0	0.67	1.75
Statewide Average	0.003	0.15	0.45

Note: ACC/MV - accidents per million vehicle.

To address the frequent run-off-road accidents on this connector, a project was initiated by the District Office of Traffic Safety and the project was constructed in 2016. It reconstructed the pavement and applied a high friction surface treatment. It also installed new advisory speed signs with flashing beacons, and lowered the advisory speed from 50 to 45 mph. The accident data shown above precedes the safety improvements constructed in 2016.

5. ALTERNATIVES

5A. Viable Alternative - Build Alternative

This alternative proposes to remove and replace the existing PCC pavement, asphalt concrete pavement and existing bridge approach slabs on Route 4 and all the ramps and connectors within the project limits.

Two optional pavement structural sections were considered; Continuous Reinforced Concrete Pavement (CRCP) and Crack Seat and Overlay (CSOL).

A Life Cycle Cost Analysis (LCCA) prepared in 2016 studied the main line of SR-4 to compare the two options. The LCCA concluded that over the 55-year analysis period, the CSOL option is \$600,000 less than the CRCP option.

The same LCCA studied the ramps and connectors, comparing the same two options of pavement type. The LCCA concluded that over the 55-year analysis period, CRCP is less costly than CSOL by approximately \$0.5-million.

Although the LCCA of the main lanes indicated that the CSOL option would cost approximately \$0.6-million less than the CRCP option, the CSOL option results in higher vertical profile grade and would require long transitions to conform to the existing bridge deck profiles. Raising the roadway profile would also reduce vertical bridge and overhead sign clearances. It would also require additional earthwork and temporary and permanent erosion control measures. In addition, it would also require extensive modifications of the existing drainage system. The resulting additional expense of the added earthwork and drainage modifications offset the potential savings in paving costs between the two options.

Based on the above analysis, the CRCP option, with 40 year pavement design life, is the preffered strategy. See Attachment B for the proposed pavement structural sections. The selected structural sections are based on HDM Table 623.1F, <u>Rigid Pavement Catalog</u> (Inland valley, Type 1 Subgrade Soil).

Existing drainage facilities include drainage inlets, culverts, downdrains, roadside ditches, detention ponds and pump stations. Most of the roadway run-off directly outfalls to Mormon Slough through an underground conveyance system. There are several spot locations with unacceptable spread on the travelled way that require installation of additional inlets and downdrains. Post construction permanent treatment of storm water runoff may be necessary and may require modifications to the drainage system to allow capture of sediment before entering Mormon Slough. The need and feasibility of such modifications will be determined during the early stages of design.

Existing metal beam guard rail, bridge approach rail and dike within the project limits will be brought up to current standards. All green roadside guide signs will be replaced with new panels made of high reflective sheeting material, and delineators, object makers and bridge information signs will be brought to current standards. Lighting will be upgraded and existing detector loops will be replaced.

5B. Rejected Alternatives

The no build alternative is rejected since it does not meet the purpose and need to restore the pavement to a state of good repair and minimize maintenance efforts and expenses.

6. CONSIDERATIONS REQUIRING DISCUSSION

6A. Hazardous Waste

Treated wood removed from existing metal beam guardrail installation will need to be disposed of at a certified disposal facility. No other hazardous waste is anticipated. A preliminary site investigation (PSI) is not required to test the soil for hazardous materials since no soil is to be exported from the project site.

6B. Value Analysis

This project does not meet the criteria for a Value Analysis study.

6C. Resource Conservation

Removed concrete pavement will become the property of the construction contractor for possible recycling.

6D. Right-of-Way Issues

All work will be within existing right of way and no utility conflicts are anticipated. Underground utilities within the project limits are located under city streets and would not be impacted by replacing the pavement on SR 4 or the ramps and connectors. The right of way data sheet is attached (**Attachment F**).

6E. Railroad Involvement:

A branch of the Northern Burlington Santa Fe Railroad is within the project limits. The railroad crosses SR 4 at PM R15.8 (Garfield Street Overhead) and crosses I-5 at PM 25.8 (Taylor Street Overhead). Work on the bridge approach slabs at these two overheads should not interfere with the railroad operations. A minimum of 50 feet lateral clearance is available from the approach slabs to the nearest track.

6F. Environmental Compliance

The project has been Categorically Exempt under Class 1 of the California Environmental Quality Act guidelines and Categorically Excluded under the National Environmental Policy Act. The CE/CE is attached (**Attachment E**). The following avoidance and minimization measures would be implemented prior to and during construction:

- Conduct Environmental Awareness Training
- Return temporarily disturbed areas to pre-project conditions
- Implement Best Management Practices
- Implement measures to reduce the spread of invasive species
- Conduct a preconstruction Nesting Migratory Bird and Raptor Survey
- Conduct a preconstruction survey for bats
- Conduct a preconstruction Small Mammal Survey
- Avoid disturbance or harm to wildlife

A National Pollutant Discharge Elimination System permit from the State Water Resources Control Board under Clean Water Act, Section 402 is required.

6G. Air Quality Conformity

Air quality conformity is not required.

6H. Title VI Considerations

The project complies with Title VI of the Civil Rights Act of 1964 and related statutes. This project will not result in disproportionate adverse transportation impact to minority and low-income populations.

6I. Noise Abatement Decision Report

A Noise Abatement Decision Report is not required for this project. Noise levels from concrete pavement removal operations during construction may exceed allowable levels during night-time hours. There are residences located within 100 feet of the eastbound SR 4 to southbound I-5 connector that could possibly be impacted. However, staging at this connector allows removal of the concrete pavement during day-time hours to minimize impacts to residences

from high construction-related noise levels.

7. OTHER CONSIDERATIONS AS APPROPRIATE

7A. Transportation Management Plan and Stage Construction

It is proposed to utilize stage construction and a cross-median detour to reconstruct the mainline pavement. Stage 1 would close the eastbound lanes and utilize the westbound lanes for one traffic lane in each direction, separated by temporary railing (Type K). Similarly, Stage 2 would shift westbound traffic onto the eastbound lanes while the westbound pavement is reconstructed.

For single lane and low volume ramps and connectors, complete closures are proposed for up to 14 days while the pavement is being reconstructed. For connectors from and to westbound SR 4, it is proposed to utilize Navy Drive and the Charter Way/I-5 interchange for a detour. Other local streets would serve as a detour for the local street ramps. The closures would be scheduled to minimize operational impacts.

At a focused constructability meeting on March 7, 2018, stage construction was proposed for high volume, multi-lane connectors by keeping at least one lane open to traffic at all times. After further analysis by the Office of Traffic Management, representatives from Project Management, Traffic Management, Traffic Operations, Maintenance, Construction, and Design met on March 20, 2018 and discussed the proposed staging plans. Due to the anticipated traffic operational issues with extended lane closures, this risk has been added to the Risk Register. To mitigate this risk, the PDT considered other options including replacing the pavement with rapid strength concrete (RSC) which requires shorter cure time and shorter closure period. This option requires up to three full weekend (55 hours) closures at each connector. This strategy and other traffic handling options and pavement rehabilitation strategies will be further evaluated during the design (PS&E) phase.

7B. Storm Water

A Storm Water Data Report (SWDR) has been approved (Attachment H) and identified appropriate construction site Best Management Practices (BMPs) to be incorporated during construction. The obliteration and replacement of the existing pavement is considered Redeveloped Area that may require post construction permanent treatment of highway stormwater runoff before reaching Mormon Slough. Possible treatment measures include bioswales and sand traps to be retrofitted into the existing drainage system. Other options will be evaluated during the design phase of the project.

This project will be covered under the Construction General Permit (CGP). The construction contractor will be required to formulate a Storm Water Pollution Prevention Plan (SWPPP) and will be expected to implement construction site

BMPs. The cost for the anticipated temporary construction BMPs are included in the cost estimate.

7C. Complete Streets

SR 4 within the project limits is not designated as a pedestrian or bicycle facility. Where on- and off-ramps meet local roads, the existing curb ramps meet current Americans with Disability Act standards. There are no feasible improvements within the scope of this project for pedestrian and bicycle accommodation.

7D. Climate Change

The project is not located within a coastal zone, but due to its relatively close proximity to the San Joaquin River Delta, it could potentially be vulnerable to sea level rise (SLR). The SLR projections are estimated at 14 inches in the year 2050, and a 40 to 55 inch increase in mean sea level by the year 2100. The proposed scope of work is to match the existing profile grade, as raising the profile would in turn require raising 22 structures within the project limits. Due to the low potential for the project to be impacted by an increase in SLR, any substantial additional modification to the project to further reduce or eliminate SLR risk is not cost effective given the 40-year design lifespan of the project.

In an effort to reduce the effect of greenhouse gasses, this project will replace existing lighting with energy-efficient light-emitting diode (LED) lighting, which reduces the associated energy costs by as much as 80 percent.

8. FUNDING, PROGRAMMING AND ESTIMATE

Funding

It has been determined that this project is eligible for Federal-aid funding.

Programming

The current construction capital cost is \$31,162,000 and the escalated (2019/2020) construction capital cost is \$33,835,000. The escalated construction cost is 10.7% above the programmed amount and will be monitored. The use of RSC to avoid long term lane closures may escalate this cost further. The funding strategy is to process a project change request once the traffic management plan is more refined and the corresponding costs can be determined. The support costs for Construction and PS&E can be managed within G-12 allowances. The current right of way estimate is \$0.

The programmed cost data is shown in the table below.

Fund Source		Fiscal Year Estimate			
20.XX.201.122	Prior	18/19	19/20	Total	
Component		In thousands of dollars (\$1,000)			
PA&ED Support	538			538	
PS&E Support		2,324		2,324	
Right-of-Way Support		19		19	
Construction Support			4,589	4,589	
Right-of-Way			48	48	
Construction			30,576	30,576	
Total	538	2,343	35,213	38,094	

The support cost ratio is 24.67%. Costs at programming were escalated at 4.2% except for R/W which was escalated at 5%.

9. DELIVERY SCHEDULE

END PROJECT EXPENDITURES	M800	01/05/2023	T
FINAL PROJECT CLOSEOUT	M900	10/31/2024	T

10. RISKS

As discussed in the programming section, the traffic management strategy for the ramp closures is a high risk that will impact the construction capital cost. Also, construction contract time will impact the construction support costs. Several other low- and very low-probability risks were identified, mostly in the Environmental and Design categories in the Risk Register. See **Attachment K**.

11. EXTERNAL AGENCY COORDINATION

Federal Highway Administration (FHWA)

This project is considered to be an Assigned Project in accordance with the current Federal Highway Administration (FHWA) and Department of Transportation (Caltrans) Joint Stewardship and Oversight Agreement. This project has not been identified as either a "Project of Division Interest" or "Project of Corporate Interest."

The project requires a National Pollutant Discharge Elimination System permit from the State Water Resources Control Board under Clean Water Act, Section 402.

The project requires the following coordination:

General Permits (Regional Permit, Nationwide Permit or Programmatic Permit)

Regional Water Quality Control Board

Clean Water Act Section 401 Water Quality Certification

Continued from page 1:			The state of the s

A. General:

Revalidation

Under the California Environmental Quality Act (CEQA), this project is Categorically Exempt and under the National Environmental Policy ACT (NEPA) it is Categorically Excluded unless:

- 1) the scope of the project changes to include additional activities or areas;
- 2) there is unforeseen discovery of sensitive or cultural resources.

B. Air/Noise/Water:

Project will not affect air quality or water quality and no further investigation is recommended. Project noise impacts are expected to be within limits except for temporary construction impacts. Caltrans Standard Specifications Section will be in the contract.

C. Cultural:

The project has no potential to affect historic properties eligible for or listed in the National Register of Historic Places.

D. Biology:

In accordance to the Migratory Bird Treaty Act (MBTA), a Bird Protection Special Provision shall be included in the construction contract. If construction occurs during the nesting season (February 15 to September 1), a preconstruction survey for migratory birds and raptors will be required fourteen (14) days prior to construction. A 100 foot (ft) buffer shall be established around migratory bird active nests until the young have fledged. If it is a raptor then a 300 ft. buffer will need to be maintained until the young have fledged. For the Swainson's hawk, a 600-foot ESA buffer is required.

If an active Burrowing Owl is observed during pre-construction surveys, a no work buffer will be established. If construction occurs between April 1 and October 15, the buffer is 565 ft. around the active burrow. If construction occurs between October 16 and March 31, a 165 ft. no work buffer is required.

E. Hazardous Waste:

The Caltrans Standard Special Provision pertaining to earth material containing Lead, 7-1.02K(6)(j)(iii), shall be added to the construction contract. Replacing guardrail post would require disposal of Treated Wood Waste and the Caltrans Standard Special Provision, 14-11.14, shall be added to the construction contract.

F. 4F Evaluation:

The project area does not contain any 4F resources.

Memorandum

To: JES PADDA

Date: 3/20/2018

Attn KAL DAHER File: CD 10 EA 1C500

LC500 Alt NA-REV1

Co SJ RTE 4

DESCRIPTION:

PAVEMENT RESURFACING AND PRESERVATION

From: Department of Transportation

Division of Right of Way Central Region

Subject: RIGHT OF WAY DATA SHEET

We have completed an estimate of the right of way costs for the above-referenced project based on the Right of Way Data Sheet Request Form dated 3/5/2018

The following assumptions and limiting conditions were identified:

Parcel

The Data Sheet request indicates that all work on this project will occur within the State's right of way, with no additional right of way needed for this project.

Utility

Project engineer states on the Right of Way data sheet request form that no potholing or utility relocation/involvement will be necessary. It is assumed that this means all utility facilities above ground and underground in the project area will be worked around. Any adjustment of facilities constitutes involvement and the full R/W utility process and timeline would be necessary before the project could be certified.

Right of Way Lead Time will require a minimum of 2 months after we receive Certified Appraisal Maps and/or Utility Conflict Plans, obtained necessary environmental clearance and applicable freeway agreements have been approved.

Recommended for approval by:

John Welch

Senior Right of Way Agent

2R PROJECT CERTIFICATION

A Safety Screening, as required by Design Information B segment of highway identified above in the project descrip	
Mark Orr, Chief District 10 Traffic Engineering Branch	Date: 10-28-2=15
This project will be scoped and designed as a 2R Projection Number 79-03. The Safety Screening that was development of this project.	
Richard Helgeson, Central Region Office Chief Project Development Division – Design IV	Date://-30 - 2015
I concur with the 2R Purpose and Need of this project.	
Paul Gennaro, District Design Coordinator	Date: 12-15-15
I concur that this project should be scoped and designed Information Bulletin Number 79-03 and that the Safety S an integral part of the development of this project. The Need for this project is pavement resurfacing and restora is to be delivered as a 2R Project.	Screening associated with this project will be nerefore, since the appropriate Purpose and
Debra "Sam" Haack District 10 Deputy Director Maintenance and Operations	Date: 12-21-7015

EVEL 2	- RISK	REGISTE	R	Project Name:	SR-4 SJ Pave	ment Rehab	DIST- EA	10-1C500	Project Manager		Jes	Padda				
				Risk Ide	ntification		-	5	R	lisk Assessm	nent			Risk Response		
Status	ID#	Туре	Category	Title	Risk Statement	Current status/assumptions	Probability	Cost Impact	Cost Score	Time Impact	Time Score	Rationale	Strategy	Response Actions	Risk Owner	Updated
Active	1	Threat	Environmental	Cultural Resources	There is the potential to uncover cultural resources (example ADA ramp work).	Landscape in the project vicinity has been heavily modified in the past.	2-Low	4 -Moderate	8	4 -Moderate	8	Construction work will need to stop if cultural resources are found.	Accept	Further studies will be conducted in PA&ED and the scope will be refined. Once these cultural resources are found in Construction the impacts are unavoidable.	Zorayda Lao	4/13/2018
Active	2	Threat	Environmental	Hazardous Waste	If soil is exported, then a preliminary site investigation (PSI) will be required to test the soil for hazardous materials.	It is assumed that no soil will be exported from the project, as stated in the PEAR request.	2-Low	4 -Moderate	8	8 -High	16	An additional 400 hours and 6 months may be requested in order to conduct the PSI. There are disposal costs in a Hazardous Waste facility.	Avoid	Further studies will be conducted in PA&ED and the scope will be refined.	Zorayda Lao	4/13/2018
Retired	3	Threat	Environmental	Biological Environment	It is assumed any drainage work will only include minor modifications to existing drainage inlets.	If these modifications impact regulated waters, then permits will be required.	2-Low	2 -Low	4	8 -High	16	Permits will have impacts on the schedule greater than 6 months.	Avoid	Further studies will be conducted in PA&ED.	Zorayda Lao	4/13/2018
Active	4	Threat	Environmental	Biological Environment	If raptors or migratory bird species are observed nesting during pre- construction surveys, then biological monitoring may be required.	It is assumed Migratory Bird Treaty Act (MBTA) pre-construction surveys for nesting birds will be required if construction occurs between February 15th and September 1st.	2-Low	1 -Very Low	2	2 -Low	4	This is a low risk probability that could cost up to \$13,500 during construction.	Mitigate	Further studies will be conducted in PA&ED to see if this is still a risk. Preconstruction surveys will be required. Netting may be utilized to prevent nesting birds.	Zorayda Lao	4/13/2018
Active	5	Threat	Environmental	Biological Environment	If special status species are observed during surveys, then additional surveys and monitoring may be required.	No special status species assumed since the risk is low.	2-Low	4 -Moderate	4	4 -Moderate	4	This is a low risk probability that could have a moderate impact to cost.	Mitigate	Further studies will be conducted in PA&ED and the scope will be refined as needed.	Zorayda Lao	4/13/2018
Retired	6	Threat	Environmental	Environmental Document Changes	New information after Environmental Document is completed may require re- evaluation or a new document.	A Biological Opinion or a programmatic Biological Opinion are not needed. No sensitive environmental resources are present.	2-Low	2 -Low	4	2 -Low	4	A Categorical Exemption under CEQA and a Catergorical Exclusion under NEPA are anticipated.	Avoid	Further studies will be conducted in PA&ED and the scope will be refined. Sensitive environmental resources should be avoided.	Zorayda Lao	4/13/2018
Active	7	Threat	Design	Ramp Closures	Stging plans, or rehabilitation strategy for high traffic volume connectors, need to be refined during PS&E.	Preliminary Staging Plans for high volume connectors were not accepted by Traffic Managemet. Extended weekend closures were also rejected.	4-High	4 -Moderate	16	4 -Moderate	16	This risk will impact project schedule and may impact scope and cost	Mitigate	If extended lane closures are not allowed to construct CRCP or CRCP-RSC pavement, the scope of work will need to be reduced to what can be constructed based on night-time closures only, such slab replacement only.	Kal Daher	3/19/2018
Active	8	Threat	Design	Design incomplete	Design incomplete	Design work is pending.	2-Low	4 -Moderate	8	2 -Low	4	Incomplete plans may result in cost increases in construction.	Avoid	Constructibility, QC/QA reviews, and Office Engineer reviews will be conducted.	Kal Daher	3/19/2018
Active	9	Threat	Design	Surveys incomplete	Not enough survey data to properly design project.	Survey pending.	2-Low	2 -Low	4	4 -Moderate	8	An incomplete will result in additional survey work and a delay in the project schedule.	Avoid	Coordinate with Surveys and Construction to ensure that there are not unecessary delays.	Kal Daher	3/19/2018
Active	10	Threat	Design	Design Changes	New or revised design standard.	2R Certified project - Geometric Design Exceptions not required.	1-Very Low	2 -Low	2	2 -Low	2	New standards may add additional scope of work and impact the schedule and cost.	Avoid	Monitor. Request exception if needed.	Kal Daher	3/19/2018
Active	11	Threat	Design	Construction Schedule	Inaccurate contract time estimates	Design to develop accurate CPM working day schedule.	2-Low	8 -High	16	4 -Moderate	8	Errors in the CPM schedule will result in additional working days that will increase capital and support costs.	Avoid	Coordinate with Construction and OCER to ensure that there are adequate working days and the traffic handling is viable.	Kal Daher	3/19/2018
Active	12	Threat	РМ	Support Costs	Underestimated support resources or overly optimistic delivery schedule.	Scope does not change and support costs and schedule are realistic. Some risk is built-in.	1-Very Low	8 -High	8	2 -Low	2	Functional units not properly resourced will result in higher support costs. Optimistic delivery schedule will also result in an overrun of support costs.	Avoid	Ensure that all appropriate functional units are resourced adequately. Monitor scope to ensure that these changes are covered by support cost increases.	Jes Padda	4/13/2018
Retired	13	Threat	РМ	Goals	Inconsistent cost, time, scope, and quality objectives.	Cost, time, scope have been properly scoped and include adequate contingencies, risk, and schedule float.	2-Low	8 -High	16	4 -Moderate	8	Poor scope and inadequate cost and time will result big cost and time impacts.	Avoid	Monitor. Evaluate changes to minimize the impacts.	Jes Padda	4/13/2018
Retired	14	Threat	PM	Staffing	Losing critical staff at crucial point of the project.	Project teams to pick-up the slack when there are staffing changes.	1-Very Low	2 -Low	2	2 -Low	2	New staffing may have negative cost and time impacts.	Mitigate	Succession planning.	Jes Padda	4/13/2018
Active	15	Threat	ROW	R/W Changes	Late discovery utility work or permits.	No utility work or permits are expected.	1-Very Low	2 -Low	2	2 -Low	2	If there are no funds budgeted to R/W capital then it will be difficult to add these funds after programming.	Mitigate	Risk mitigation strategy to ensure that late discovery utilities and permits can be addressed.	Jes Padda	4/13/2018
Active	16	Threat	Design	Treatment of subgrade	Difficulty treating of the subbase in areas constructed under 54 hours.	Design will evaluate alternatives.	2-Low	2 -Low	4	8 -High	16	Lime treatment requires 3 days to cure and cement treated base requires 72 hours to cure.	Mitigate	Design, Materials, and Construction will develop a strategy to address this concern and maintain the planned design life.	Kal Daher	4/30/2018
Active	17	Threat	Design	Encountering utilities during subgrade construction	Unknown utilities such as electrical and irrigation lines could become damaged during subgrade construction.	Evaluate the need for additional potholing.	2-Low	2 -Low	4	8 -High	_16	During construction of the subgrade, unknown utilities could be damaged requiring repair. If encountered during full closures, this risk has the potential to exceed the 54 hour full closure allotment.	Avoid	Design and Construction will consider additional potholing in either project development of in construction.	Kal Daher	4/30/2018
Retired	16	Threat	Organizational	Funding	Capital funding unavailable for construction.	Project will be programmed in 2018 SHOPP.	1-Very Low	4 -Moderate	4	4 -Moderate	4	Funding shortfalls result in inadequate funding for SHOPP.	Accept	Monitor. Options include downscope or delay the project.	Jes Padda	4/13/2018

STATE OF CALIFORNIA - DEPARTMENT OF TRANSPORTATION RISK REGISTER CERTIFICATION (ACCOUNTABILITY CHECKPOINTS) FORM

PPM-0001 (REV 07/2013) The risk register is to be approved and signed-off by the District Deputies* listed below for all scalability levels. By signing this form, you are certifying that you have reviewed the risks documented in the register and agree that they have been managed to the extent possible by the PDT. Project Information: Capital Project Major Maintenance Project (Check One) Total Estimated Cost: \$ Project ID/District-EA 1016000026/10-1C500 **Project Description** SJ SR 4 Pavement Resurfacing and Restoration Project Manager (PM) Jes Padda Project Risk Manager (For Risk Level 3 Projects) No Risk Register Certification Required - - Check box if project is less than \$1 million in total cost and risk register not prepared. Sign below and submit this form with PID, PA&ED, PS&E submittal, and RE Handoff File (as applicable). Project Manager Signature PA&ED (Required for Capital Projects Only) JES PADDA Project Manager NABEELAH ABI-RACHED Chief, Central Region Environmental **BRIAN EVERSON** Chief, Central Region Project Development MONICA KRESS, Acting Deputy District Director, Program/Project Management Prior to PS&E (Required for Capital Projects and Major Maintenance Projects) JES PADDA N/A Project Manager Date **BRIAN EVERSON** N/A *Chief, Central Region Project Development Date MARK DER MATOIAN N/A
